

Animals need protecting too

There are a lot of studies and news coverage regarding the effects of Electro Magnetic Frequencies (EMFs).

For millions of years we lived with the earth's natural magnetic fields but in the last 20-30 years our environment has been swamped like never before! Our air is filled with electromagnetic radiation from radio stations, TV transmissions, microwaves from mobile phone masts and electric and magnetic fields from all our home & work appliances. As a result our natural body defences are overloaded!

Until now the focus has always been on how we protect ourselves. But what about our animals? In some ways they are even more sensitive to EMFs than we are and will naturally avoid areas if they have the option.

People who use SOSATEC Balancers report having clearer thinking, increased awareness, calmness, better sleep, enhanced mental focus, endurance, stamina, vitality and more. The same benefits are available to horses, dogs and cats (in fact any animal) with our **SOSATEC Animal Balancers**.

EMF Protection for Horses, Dogs & Cats with SOSATEC Animal Balancers

SOSATEC Balancers are made of high grade

electronic silica programmed with natural botanical, mineral and harmonic frequencies at a quantum level, coiled copper amplifiers and embedded in a quality acrylic resin. These natural quantum frequencies assist in retuning some of the chaotic disorganized energy that is being circulated round the home/office, thus easing the irritation on the subconscious and reducing stress, improving mental agility, balance, and increasing your overall sense of well-being.

Animal Balancers can be worn on the collar for dogs & cats, plaited into a horse's mane or placed wherever they sleep.

Fuse Box Balancers are to be placed either on the side of the fuse box to work on the whole room or building.

The balancers help to ease the effect of electro-sensitivity caused by the chaotic disorganized energy in that environment.

Also available for humans!
